#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

display that is expected to show excellent properties in terms of design and performance will replace the conventional flat panel displays and enable displays to be used for products and areas where a display would normally not be.

With the strong hope that transparent display may rise over the next few years, a number of manufacturers have been eager to have a try. Last in 2012, Taiwan-based AU Optronics, the world's fourth largest maker of LCD, and Industrial Technology Research Institute, a nonprofit R&D organization, jointly announced that they had successfully developed transparent display with manufacturing performance rate of 90%. Janglin Chen, Director of ITRI's Display Technology Center, said the product, using a novel electrical principle, by applying voltage to control the image change, can be widely used in portable consumer electronic products, shop windows and public information facilities. Both of them claimed to strive towards the goal of the penetration rate of 5 percent while facing the outer development.

In addition, AUO's domestic rival Changhua Picture Ltd. followed to work on surface emitting energy of the acrylic liquid crystal to successfully accomplish the purpose of a launch of its transparent display in early 2014. For CTE, it seems like transparent displays are mostly being used in interactive advertising and other related commercial products. Besides, Nova Media Technology Corp, a local digital signage advertising network operator that often software for retailers, brand owners and corporate accounts, released a 40-inch transparent display to demonstrate high-end consumer products such as luxury goods and wines. Nova Media hopes the transparent, multi-touch LCD could become as hot as its good-better retail product in about two years. There, at 2013 International CES held in early January, Samsung showed a transparent display screen

that comes complete with a built-in PC, speakers, LED bar and protective glass that make it perfect for retail companies who want to create interactive display cases for their products. The firm also noted that the display's thin LCD panel on the front of the transparent display allows images and animations to dynamically interact with the merchandise inside the showcase while still enabling passers by to view the product. Not long after the demonstration, LG Electronics unveiled its transparent display at the Integrated Systems Europe (ISE) 2013, the world's largest professional audio visual and integrated systems trade show. The firm featured a perfect match for installation in vending machines where it can show product images and promotional videos, maximizing precious line-of-sight real estate. ☺
